

WITS Changes – 15.6.0 Release (Mental Health)

5/19/2014

In the 15.6.0 Release 4 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Staff Account Information: Incomplete Role Description for Clinical Supervisor **Resolution:** The Role Description for Clinical Supervisors have been updated to include the statement "This role can sign off on TX Review on behalf of other TX Review team members"
- 2) Account/Pin #: Closing the change pin box prevents the user from having to change their pin the next time **Resolution:** Changed the forgot & reset password/pin processes so that the password and pin change fields are on the same screen. This will allow all credentials validation to be checked at once.
- 3) Alerts: The Trigger Point is incorrect for Treatment Plan Review Alert types **Resolution:** Updated the Trigger Point for Treatment Plan Review Alert Types to be "Next Review Date" field on the Tx Plan Profile.
- 4) Claim Batch List: Default search returned after viewing claim items **Resolution:** The search criteria and results sets for both the Claim Batch and Claim Item lists on the Claim Batch List screen are now retained

Below you will find a summary of the changes to WITS for the 15.6.0 release (which took place May 20, 2014). The 15.6 release was pushed to production with the 15.7 release. When these changes are made in Idaho-Mountain and Idaho-Pacific, the top right portion of your screen will say 15.7.0.
