

## WITS Changes – 17.10.1 Release (Mental Health) 12/29/2014

In the 17.10.1 Release 2 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

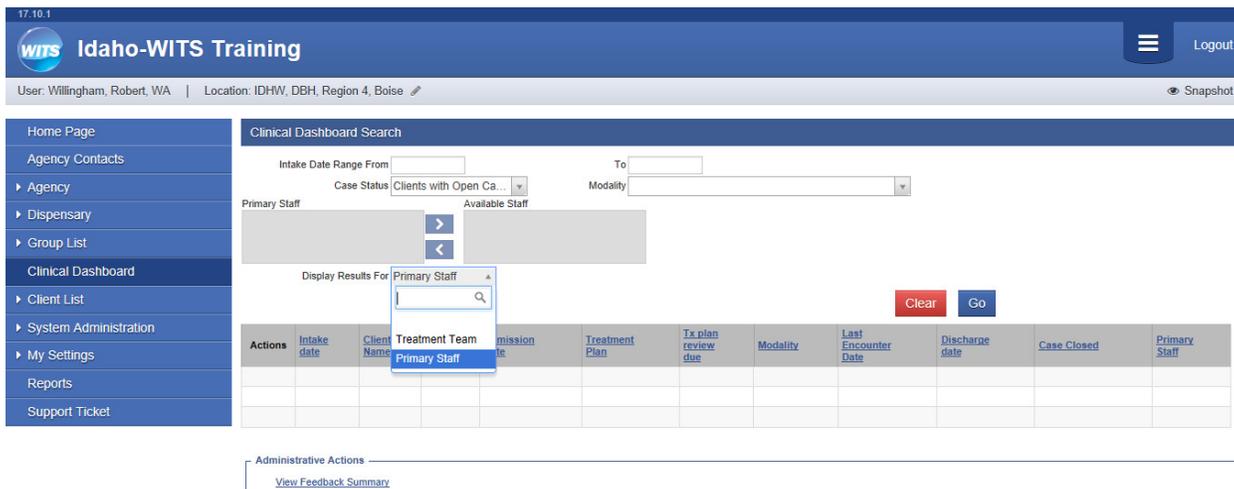

- 1) Intake: Unable to create an intake. **Resolution:** Fixed a permission issue for non-WITS Administrators where the Priority Population field on an Intake would be read only but still flagged as required.
- 2) Consents: multiple yellow screens viewing and linking in 17.10.0. **Resolution:** Fixed the yellow screens that occurred while accessing the Linked Consents.

Below you will find a summary of the change to WITS for the 17.10.1 release (which took place December 30, 2014). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.10.1.

### Clinical Dashboard

The Clinical Dashboard has been modified to allow for viewing by Primary staff as well as members of the Treatment Team.

The Clinical Dashboard Feedback has been modified to allow for viewing and status update of multiple feedbacks rather than just the most recent.

**Intake**

The "Is client under court supervision?" and "Supervising County" fields have been added to the Intake screen. The "Is client under court supervision?" field is a required field on all intakes. This field should be marked as Yes if the client is under probation, Parole, or any other court supervision. If "Is client under court supervision?" is set to Yes, the "Supervising County" field becomes required. Enter the county that they client is under court supervision as referenced in the "Is client under court supervision?" field.
