

WITS Changes – 17.9.0 Release (Mental Health)

12/29/2014

In the 17.9.0 Release 4 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Alert List: Getting yellow screen error when reviewing 'Periodic Assessment Update' alerts. **Resolution:** Fixed the yellow screen issue that occurred when reviewing the 'Periodic Assessment Update' alerts from Home Page and from Agency Alert list.
- 2) Alerts: 'Rejected Claim Items' alert multiple issues. **Resolution:** Fixed the issue where the 'Rejected claim item' Alerts did not generate for 'Treatment Team Primary care staff member' and for "Encounter Release to Billing Staff".
- 3) Reports: Change the calculation of episode admitted date in the intake_admission_discharge_ssrs view. **Resolution:** Changed the calculation of episode admitted date in the intake_admission_discharge_ssrs view. The episode_admitted_date is now the date of the original intake matching the episode_intake_id.
- 4) Dispensary: System lag or page will not open when accessing 'Administer Inventory' screen. **Resolution:** Optimized the query to improve performance for both the Administer Inventory & Manage Inventory search/list screens. Also, the 'Enter' key will now trigger the search for both screens.

WITS was updated to the 17.9.0 release on December 30, 2014. When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.9.0.
