

WITS Changes – 17.12.0 Release (Mental Health)

2/19/2015

In the 17.12.0 Release 12 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Treatment Plan: Info message to select an associated Tx Review to edit occurs when all associated Tx Reviews are read-only. **Resolution:** When clicking 'Perform Review' where all existing treatment reviews are read-only (due to being 'completed' or 'cancelled'), the user is now taken to the Treatment Review Profile screen in insert mode. Previously for this scenario, the user was taken to the Treatment Review List screen, with the 'Multiple treatment reviews exist for this treatment plan. The "Please select the review that you would like to edit" information message displayed, despite none of the reviews being editable.
- 2) Consent: The term 'eCourt' is still being used on the consent screen. **Resolution:** 'eCourt' has been changed to 'Court' on the consent screen.
- 3) Tx Plan: Users were encountering 3 issues when deleting/making changes. **Resolution:** The issues that occurred while deleting/making changes to Tx Plan have been corrected.
- 4) Diagnosis: The system is incorrectly stopping the user from deleting an axis diagnosis. **Resolution:** Fixed an issue where the system was incorrectly stopping the user from deleting an axis diagnosis.
- 5) Clinical Dashboard: All open clients were being displaying on search instead of those with 'Treatment Team' selected. **Resolution:** The search criteria and several issues on the Clinical Dashboard have been resolved.
- 6) Yellow Screens: Option to return to WITS from a yellow screen is not available. **Resolution:** Rather than seeing the full yellow screen with no way to return to WITS, only the Message ID and a link to return to the Home Page are now again being displayed.
- 7) Encounter: Diagnoses for new encounters are erroneously being pulled from previous encounters instead of the diagnosis list. **Resolution:** Diagnosis info will be pulled from the most recent diagnosis regardless of source.
- 8) Consent: Users were receiving a yellow screen when trying to review a consented admission. **Resolution:** Viewing a consented admission will no longer result in an error screen.
- 9) Encounter: Hide "Billable" indicator on Generate Report and Consented View when hidden onscreen. **Resolution:** "Billable" indicator on Generate Report and Consented View is hidden when hidden on screen.

- 10) Encounter: Cannot delete an Encounter with rejected status. **Resolution:** User can now delete the Encounter with rejected status.
- 11) Admission: Clicking 'Generate Report' produces the error 'The controls collection cannot be modified because the control contains code blocks <i.e. % ... %>. **Resolution:** Clicking 'Generate Report' from the Admission no longer produces an error report.
- 12) Alerts: Users were able to access the intake in a facility the staff didn't have permission for. **Resolution:** Staff can no longer access an activity corresponding to a facility for which they are not assigned. When clicking to review an alert for this scenario, the error message 'This client record is for a facility that you are not assigned to. Your current context has not been changed.' will now be displayed.

WITS was updated to the 17.12.0 release on February 20, 2015. When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.12.0.
