

## WITS Changes – 17.20.5 Release (SUD)

6/12/2015

In the 17.20.5 Release 8 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Authorization: '# Authorized Units' field should not be Read-Only for All Vouchers. **Resolution:** The '# Authorized Units' field is now read-only for provisional vouchers only; this field will be editable for all other vouchers.
- 2) Authorization Period Stage: Getting error 'This authorization period stage contains the expired services'. **Resolution:** On the Authorization Period Stage, when a user clicks Review on a stage, the warning message "This authorization period stage contains the expired services" appears only when there is at least one expired service.
- 3) Consented Activity List: Users were getting an error when viewing Client Profile and Intake Transaction. **Resolution:** View properly displays the Client Profile and Intake Transaction.
- 4) Intake: "Did Client Sign ATR Application Form" is now required on the intake screen for ATR. **Resolution:** Did Client sign ATR Application Form? is not required on intake screen.
- 5) Group Notes: Missing "# of Units" field and column for creating encounter notes. **Resolutions:** The 'Encounter' column is now correctly appearing on the Group Session Notes screen.
- 6) TX Review Profile: "Review Period From" field used to be required. **Resolution:** "Review Period From" field is required and has a date picker now. The value in "Review Period From" field can be saved. 'Time' field next to the Review Period dates is removed.
- 7) Authorization: End date becomes Read-Only for Non-Provisional Referral voucher. **Resolution:** End Date is now back to being editable for non-provisional referral vouchers; it was intended to only be read-only by the provider for provisional referral vouchers as per enhancement work item #22123 in the 17.12 release.
- 8) Vouched amount is still showing up as available even though referral was not accepted & voucher closed. **Resolution:** When referrals are rejected and associated vouchers are auto-closed, Vouched Amount & Available Amount will be set to \$0.00 in accordance with other closed vouchers.

Below you will find a summary of the change to WITS for the 17.20.5 release (which took place June 16, 2015). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.20.5.

## Diagnosis List

The Diagnosis List has been enabled. The Diagnosis List displays all diagnoses entered for the client. When a Diagnosis record is added from the Diagnosis List, the source is "Diagnosis List". Other sources are Admission, Treatment Plan, Discharge, etc. The Diagnosis Summary activity appears on the Activity List only once so that the activity list does not get longer with each diagnosis. The Diagnosis Summary is not able to be consented because we consent specific Diagnosis records and not a summary. The Diagnosis List appears on the Consent as a consentable activity, this will disclose all diagnosis, regardless of source, where the diagnosis date is included in the consent dates.

## Header

The context-specific help link has been enabled. When page specific guidance is available, the video icon will appear and the user will be able to access information specific to the current screen in WITS.
