

WITS Changes – 15.1.0 Release (SUD)

3/11/2014

In the 15.1.0 Release 5 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Change Password: Possible incorrect error message was being displayed **Resolution:** The error message now states "Current password may be incorrect or you may be using a password you have used before. Please verify your password or change the new password."
- 2) Group Session: Yellow screen occurs upon creating group session from the scheduler (a scheduled group) then clicking review for a client **Resolution:** Previously, the system should display an error if the Review link was used for a client after the group session was created from the Scheduler. This error has been fixed now the Individual Note screen loads correctly.
- 3) Authorization List: Generate Report not working **Resolution:** When generating the report for authorizations on either the provider or contractor Authorization List screen, if the system will return more than 1000 records, the user will now receive an error message asking them to limit the search.
- 4) Consent: Criminal Justice consent report showing wrong UCN **Resolution:** The correct UCN now appears in the header of the Criminal Justice Consent form.
- 5) Claim Batch: Unable to remove a claim from a batch **Resolution:** Previously when attempting to remove at least 1 claim from a claim batch the system would produce a yellow page and not remove the claim. This has been corrected.

Below you will find a summary of the changes to WITS for the 15.1.0 release (which took place March 13, 2014). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top right portion of your screen will say 15.1.0.
