

## WITS Changes – 15.2.0 Release (SUD)

3/11/2014

In the 15.2.0 Release 6 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Fee Determination: Creating a fee determination does not get saved to the selected intake  
**Resolution:** Previously, if the client had more than one intake, the system would not necessarily register the Fee Determination in the currently selected intake. This has been resolved. The currently selected intake gets associated with the new Fee Determination record.
- 2) Alerts: Yellow screen error encountered when clicking Review from "See All In Agency" list  
**Resolution:** A yellow screen no longer occurs when clicking Review for "Reauthorization Due" alerts.
- 3) Contract Management: Slow performance for Agencies with a large number of facilities  
**Resolution:** Improved performance for navigating to, and making changes on, the Contract Profile, Contract-Facility List, and Key Activity List screens.
- 4) Intake: Error when re-opening, editing, or closing for clients with multiple active intakes  
**Resolution:** If the client has more than one open intake, the user is now able to edit or close the intakes without an error message.
- 5) Claim: Primary and add-on claim items being put in different claims  
**Resolution:** The bug that was causing primary and add-on claim items in different claims has been fixed.
- 6) EOB Transaction List: Maximum number of records returned limit not set  
**Resolution:** Added a maximum number of records to return when searching as is the standard behavior in WITS.

Below you will find a summary of the changes to WITS for the 15.2.0 release (which took place March 13, 2014). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top right portion of your screen will say 15.2.0.
