

WITS Changes – 17.25.12 - 17.25.14 Releases (SUD)

1/7/2016

In the 17.25.12 - 17.25.14 Releases 3 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Menus: Not displaying upon refresh. **Resolution:** Implemented a change to get around an Internet Explorer error (in IE10 or earlier versions) that was causing the left menu links to be hidden when search screens return a large number of records.

- 2) Encounters: Diagnoses not populating when the most recent dx is from a Tx Plan Review. **Resolution:** When Treatment Plan Review is the source of the most recent diagnosis prior to the Encounter Start Date, the diagnosis was not pre-populating. To ensure pre-population of the appropriate diagnosis, Treatment Plan Review diagnoses will no longer...
 - ~ be included in determining the active diagnosis for the entered Encounter Start Date
 - ~ be factored into expiration date calculation of diagnosis records
 - ~ appear on the Diagnosis List screen

- 3) Scheduler: Yellow error screen when creating Group Session from Scheduler. **Resolution:** A yellow screen no longer occurs when creating or viewing a group session from a scheduled group appointment.

WITS Production sites will be updated with the 17.25.12 – 17.25.14 releases on January 9, 2016. When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.25.14.
