

WITS Changes – 18.1.4 Release (SUD)

1/7/2016

In the 18.1.4 Release 29 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Diagnosis: Non-clinical staff is not able to add diagnoses & that was supposed to be included in Enhancement WI # 23897. **Resolution:** Non-clinical staff who have the Client Diagnosis role are able to add & edit diagnoses on the Diagnosis List.
- 2) Diagnosis: When editing Diagnosis for old activity, Axis II values are saved under Axis I and Axis V does not save when user clicks "Save" or "Finish". **Resolution:** In AK, this was corrected so that when a user edits a Diagnosis in an old activity (prior to ICD10), Axis II values are saved in the proper section and Axis V values are also saved when clicking "Save" and "Finish.". In HI, this was fixed so that the Axis drop down is now loading the correct values instead of the Dx Categories (Behavioral, Medical & psychosocial).
- 3) Encounters: Receiving error when generating report on Encounters. **Resolution:** Users can now click Generate Report on the Encounter screen without encountering an error.
- 4) Accessibility: JAWS not reading various fields properly on Discharge and Diagnosis. **Resolution:** The discharge module and diagnosis screens throughout the system are now compatible with JAWS.
- 5) Vital Signs: Clicking 'Finish' does not return user to the previous screen. **Resolution:** The user is now returned to the Activity List screen when clicking Finish on the Vital Signs screen if it was accessed from the Navigation Menu.
- 6) Diagnosis: Optimize the query. **Resolution:** Optimized the queries to improve the performance in using the diagnosis dropdowns system-wide.
- 7) Diagnosis: Change dropdowns to start searching only after the user types in 2 characters. **Resolution:** To improve performance, diagnosis dropdowns throughout the system will now display available selections only after at least 2 characters are entered.
- 8) GAIN: Consented GRRS only populates Axis II. **Resolution:** All diagnosis axis data is now populated on the consented GRRS.
- 9) Authorization Dashboard: Bugs in the Authorization Dashboard. **Resolution:** Authorization Dashboard is now filtering by facility and the "Auth End Date" turns Red when Today – "Auth End Date" ≤ 14 days either in the past or future.
- 10) GAIN: System gives yellow screen error when user tries to review the GAIN Summary. **Resolution:** An error no longer occurs when reviewing a GAIN-I or clicking 'Download/Update GAIN Summaries'.

- 11) GAIN: Axis information not populating on GRRS. **Resolution:** Diagnosis axis data is now populating on the GRRS.
- 12) Misc. Notes: Do not allow entry of end date/time that is less than start date/time. **Resolution:** This was corrected so that users can no longer enter an end time that is prior to the start time.
- 13) Encounters: Can Release to Billing for a closed case. **Resolution:** The 'Release to Billing' link is now hidden for encounters in closed cases.
- 14) Program Enrollment: Unable to end PE as disenrollment fields contain expired values. **Resolution:** Resolved the issue where the user was not able to enter the TEDS Disenrollment screen when the Disenrollment Type is expired in code table. Users can now go to TEDS disenrollment screen without saving and select another Disenrollment Type.
- 15) ASAM Concurrent Review: Comments from the most recent ASAM do not populate on the next record. **Resolution:** Fields are now pre-populated with the values from the most recent ASAM.
- 16) Billing: Claim Item cannot be adjusted because Diagnosis is an invalid ICD version - wits batch billing. **Resolution:** Previously users that did not have diagnosis enabled on encounters, ran into problems modifying claim items as some ICD 9 / ICD 10 checks were occurring for all claim items. This was fixed so that the diagnosis no longer checks for claim items if the encounter did not have a diagnosis associated.
- 17) Diagnosis: Non-clinical staff with just the role of Client Diagnosis are not able to add/edit diagnoses. **Resolution:** All users with a clinical role will now be able to see the Diagnosis List Screen, but only users with a role of Client Diagnosis will be able to add/edit diagnosis records. Non-clinical staff with just the role of Client Diagnosis are now able to add/edit diagnoses records without also requiring the Clinical Full role.
- 18) Diagnosis: When New diagnosis effective Date < prior diagnosis Effective date, it updates Prior Diagnosis Expiration Date incorrectly. **Resolution:** When a new diagnosis is inserted with an Effective Date less than the Effective Date of the current active diagnosis, it now inserts the new diagnosis selected by the user and calculates the Expiration Date using the Effective Date of the next diagnosis.
- 19) Diagnosis: Error message appears when primary diagnosis is filled in. **Resolution:** Old Diagnosis records created before 7/20/15 are no longer displaying the error message.
- 20) Billing: claim batches should not be marked billed when batch has no claim items. **Resolution:** An error message will now be displayed upon clicking 'Bill It' or 'Send To Clearing House' for a claim batch that does not include any claim items. This rule is being implemented to avoid 837 Processor failures downstream.

- 21) Encounter: When created via Group Session or Scheduler, Diagnoses are not initially populated and Duration is not initially auto-calculated. **Resolution:** The issue has been resolved where diagnoses were not automatically populating for encounters created through the Group Session or Scheduler until the screen refreshed (e.g. choosing a date/time). Encounters will also now trigger Duration auto-calculation.
- 22) Diagnosis: Diagnosis date/time not pre-populating correctly if they are backdated. **Resolution:** For the Outcome Measures, Treatment Plan and all Assessments, the Diagnosis Date/Time is now prepopulating correctly when the Activity date is backdated.
- 23) Diagnosis: Issues with ICD-9/10 codes pulled into Encounter. **Resolution:** Diagnosis code values that appear in the dropdowns will now be filtered out if the Diagnosis Effective Date is not within the diagnosis code's effective and expiration dates.
- 24) Discharge: Discharge Date is defaulting to today's date instead of Program Enrollment End Date. **Resolution:** Discharge Date will now default to the End Date of the most recent program enrollment.
- 25) Client List/Search: Page seems to disappear & re-appear due to large amount of results in IE 10. **Resolution:** Screen now renders without multiple flickers/refreshes when returning a large result set in IE10 or earlier versions.
- 26) GAIN: Unable to access GAIN due to "Certificate Thumbprint" error message. **Resolution:** A certificate thumbprint error no longer occurs when doing a sync.
- 27) Various: Drop down boxes are too narrow to view selected values. **Resolution:** Drop down fields that were too narrow to view and select values have been set to the appropriate width.
- 28) Report: Receiving a yellow error screen or an error message when viewing miscellaneous reports. **Resolution:** Fixed the yellow error screen and error message when viewing miscellaneous reports.
- 29) Tx Plan: Getting error when Generating Tx Report. **Resolution:** User can generate a report when a client has an intervention or not in their TX Plan.

Below you will find a summary of the change to WITS for the 18.1.4 release (which took place January 9, 2016). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 18.1.4.
