

WITS Changes – 17.11.0 Release (SUD)

12/29/2014

In the 17.11.0 Release 5 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

- 1) Agency and Homepage: UI formatting issues. **Resolution:** Fixed UI formatting issues.
- 2) Group Session List: Users were getting an invalid query error message on going back to group session list. **Resolution:** After users review the session and come back to session list screen, users do not get invalid query error and the list is repopulated based on the date parameters which users set.
- 3) Authorization Dashboard: Field values are not showing up as links unless associated with ATR3. **Resolution:** Links will now be displayed on Client Name, ASAM and Change Request if the referral is accepted and the authorization's agency is the same as the current context agency.
- 4) Consented ASAM: “bbbbbbbbbbbbbbbb” appears at the top of the page when reviewing a consented ASAM. **Resolution:** “bbbbbbbbbbbbbbbb” no longer appears at the top of the consented ASAM.
- 5) Client Search: 'First Name' search field on the Client List screen is limited to 10 characters. **Resolution:** Users can now enter up to 30 characters in the 'First Name' field on the Client List screen.

WITS was updated to the 17.11.0 release on December 30, 2014. When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.11.0.
